## Home-Based and Residential Care

### Home Care Packages

As an outsourced aged care rehabilitation service provider, our accredited staff travel to our clients to deliver quality health support services.

With experienced aged care physiotherapists, occupational therapists and other allied health professionals on our team, we provide the support you need to deliver the highest level of individual care

Our skilled allied health staff work within residential aged care settings including retirement villages and nursing homes, as well as in home care, to support patients' health and wellbeing.

### The health support services you need, in the comfort and privacy of your own home.

At Aged Care Rehabilitation Services, our team of in-home allied health professionals play a very important role to develop an individualised treatment plan to lead you to your personal goals.

They then build a network of the different health services providing a client-centred approach, with an emphasis on ongoing collaborative communication between all key stakeholders in the clients care.

## Short Term Restorative Care

### Develop or regain the skills and confidence required for greater function.

Short term restorative care services are provided to patients who require additional support to restore their physical health and independence after surgery or as a result of complex or chronic health conditions. These services often follow formal rehabilitation programs and are designed to improve mobility, independence and quality of life for people living with a disabling medical condition. Our services help patients develop or regain the skills and confidence required for greater function, whether they require mobile physiotherapy, a visiting podiatrist or other convenient services to get them back on the pathway to improved health and comfort.

## Individual Services

### Qualified and caring health professionals to support your loved one in home based care.

Whether your loved one needs assistance with rehabilitation, exercise therapy, musculoskeletal conditions or support to achieve their daily goals, ACRS can assist by visiting patients within their own home.
